Mojak Publication

Entry	:Productivity Increasing Through Project Management Perspective
Title and author name	:Amirhossein Akhavan Mofrad, Narges Bahrami.
Publication Specifications	:Tehran: MOJAK, 1395 = 2016
Outward Specifications	:P. 240, Illustrated.
ISBN	: 978-600-8634-38-6, Rial 300000
Status cataloged	:FIPA
Memo	:English
Title Transcribe	:Productivity
Subject	:Productivity -- Management
Added Entry	:Bahrami, Narges, 1360.
Congress Classification	:1395 4 P 3 A / 57 HD
Dewey decimal classification	:313/118
National Bibliography Number	:4498906

PREFACE.....	1
INTRODUCTION.....	5
ACKNOWLEDGMENTS	7
THE AGILE SOFTWARE DEVELOPMENT SERIES.....	9
CHAPTER 1: THE AGILE REVOLUTION.....	11
1-1 Innovative Product Development.....	11
1-2 Reliable Innovation	15
1-2-1 Continuous innovation	16
1-2-2 Product Adaptability	16
1-2-3 Reduced Delivery Schedules	16
1-2-4 People and Process Adaptability	17
1-2-5 Reliable Results.....	17
1-3 Core Agile Values	17
1-3-1 Responding to Change	19
1-3-2 Working Products	20
1-3-3 Customer Collaboration	22
1-3-4 Individuals and Interactions	22
1-4 Agile Project Management.....	23
1-4-1 Agility Defined	25
1-4-2 The APM Framework	27
1-5 Thriving in a Chaordic World.....	28
1-6 Our Journey.....	30
CHAPTER 2: GUIDING PRINCIPLES: CUSTOMERS AND PRODUCTS.....	33
2-1 THE GUIDING PRINCIPLES OF AGILE PROJECT MANAGEMENT.....	33
2-2 DELIVER CUSTOMER VALUE	35
2-2-1 Innovation and Adaptability.....	36
2-2-2 Planning and Control to Execution	37

2-2-3 Delivery versus Compliance	38
2-3 EMPLOY ITERATIVE, FEATURE-BASED DELIVERY	40
2-3-1 Creating a Better Product	41
2-3-2 Producing Earlier Benefits	43
2-3-3 Progressive Risk Reduction	44
2-4 CHAMPION TECHNICAL EXCELLENCE.....	45
2-5 CUSTOMERS AND PRODUCTS	48

CHAPTER 3: GUIDING PRINCIPLES: LEADERSHIP

COLLABORATION MANAGEMENT 49

3-1 The Business of APM	49
3-1-1 Reliable, Not Repeatable.....	50
3-1-2 Progress Reporting	52
3-2 Leadership-Collaboration Management.....	54
3-3 Encourage Exploration.....	57
3-3-1 Shared Space	59
3-3-2 Encouragement Isn't Enough	60
3-4 Build Adaptive (Self-Organizing Self-Disciplined) Teams.....	62
3-4-1 Getting the Right People	63
3-4-2 Articulating the Product Vision	63
3-4-3 Encouraging Interaction	64
3-4-4 Participatory Decision Making	65
3-4-5 Insisting on Accountability	67
3-4-6 Steering, Not Controlling	67
3-4-7 Self-Discipline	68
3-5 Simplify.....	69
3-5-1 Generative Rules	70
3-5-2 Barely Sufficient Methodology.....	71
3-6 Principles to Practices	72

CHAPTER 4: AN AGILE PROJECT MANAGEMENT MODE..... 73

4-1 An Agile Process Framework	73
4-2 Phase: Envision	75
4-3 Phase: Speculate.....	75
4-4 Phase: Explore.....	76
4-5 Phase: Adapt	76
4-6 Phase: Close	77
4-7 Judgment Required	77
4-8 Project Size	78
4-9 Agile Practices	78

CHAPTER 5: THE ENVISION PHASE	81
5-1 Phase: Envision	81
5-2 Practice: Product Vision Box and Elevator Test Statement.....	85
5-2-1 Objective	85
5-2-2 Discussion	85
5-3 Practice: Product Architecture	88
5-3-1 Objective	88
5-3-2 Discussion	89
5-3-3 Guiding Principles.....	92
5-4 Practice: Project Data Sheet	92
5-4-1 Objective	92
5-4-2 Discussion	93
5-4-3 Tradeoff Matrix.....	94
5-4-4 Exploration Factor.....	96
5-5 Practice: Get the Right People	98
5-5-1 Objective	98
5-5-2 Discussion	98
5-6 Practice: Participant Identification.....	101
5-6-1 Objective	101
5-6-2 Discussion	101
5-7 Practice: Customer Team-Developer Team Interface.....	103
5-7-1 Objective	103
5-7-2 Discussion	104
5-8 Practice: Process and Practice Tailoring	107
5-8-1 Objective	107
5-8-2 Discussion	107
5-8-3 Self-Organization Strategy.....	108
5-8-4 Process Framework Tailoring	110
5-8-5 Practice Selection and Tailoring	111
5-8-6 Early Planning.....	113
5-9 Envision Summary	114
 CHAPTER 6: THE SPECULATE PHASE	 115
6-1 Phase: Speculate.....	115
6-2 Practice: Product Feature List	119
6-2-1 Objective	119
6-2-2 Discussion	119
6-3 Practice: Feature Cards	121
6-3-1 Objective	121

6-3-2 Discussion	121
6-4 Practice: Performance Requirements Cards.....	124
6-4-1 Objective	124
6-4-2 Discussion	124
6-5 Practice: Release, Milestone, and Iteration Plan.....	125
6-5-1 Objective	125
6-5-2 Discussion	125
6-5-3 Iteration 0	129
6-5-4 Iterations 1—N.....	130
6-5-5 Next Iteration Plan	136
6-5-6 First Feasible Deployment	137
6-5-7 Estimating	138
6-5-8 Scope Evolution	140
6-5-9 Risk Analysis and Mitigation.....	142
6-6 Speculate Summary.....	146

CHAPTER 7: THE EXPLORE PHASE..... 149

7-1 Phase: Explore.....	149
7-2 Practice: Workload Management.....	152
7-2-1 Objective	152
7-2-2 Discussion	152
7-3 Practice: Low-Cost Change	153
7-3-1 Objective	153
7-3-2 Discussion	153
7-3-3 Technical Debt	154
7-3-4 Simple Design	156
7-3-5 Frequent Integration.....	158
7-3-6 Ruthless Testing	161
7-3-7 Opportunistic Refactoring.....	161
7-4 Practice: Coaching and Team Development.....	164
7-4-1 Objective	164
7-4-2 Discussion	164
7-4-3 Focusing the Team on Delivering Results	165
7-4-4 Molding a Group of Individuals into a Team	166
7-4-5 Developing Each Individual's Capabilities	170
7-4-6 Providing the Team with Required Resources and Removing Roadblocks	171
7-4-7 Coaching the Customers	171
7-4-8 Orchestrating Team Rhythm.....	172
7-5 Practice: Daily Team Integration Meetings	173

7-5-1 Objective	173
7-5-2 Discussion	173
7-6 Practice: Participatory Decision Making	176
7-6-1 Objective	176
7-6-2 Discussion	176
7-6-3 Decision Framing	179
7-6-4 Decision Making	180
7-6-5 Decision Retrospection	184
7-6-6 Leadership and Decision Making	185
7-6-7 Set- and Delay-Based Decision Making	186
7-7 Practice: Daily Interaction with the Customer Team	187
7-7-1 Objective	187
7-7-2 Discussion	188
7-7-3 Stakeholder Coordination	189
7-8 Explore Summary	189

CHAPTER 8: THE ADAPT AND CLOSE PHASES..... 191

8-1 Phase: Adapt	191
8-2 Practice: Product, Project, and Team Review and Adaptive Action	193
8-2-1 Objective	193
8-2-2 Discussion	193
8-2-3 Customer Focus Groups	194
8-2-4 Technical Reviews	196
8-2-5 Team Performance Evaluations	197
8-2-6 Project Status Reports	199
8-2-7 Adaptive Action	206
8-3 Phase: Close	207
8-4 Adapt and Close Summary	208

CHAPTER 9: BUILDING, LARGE ADAPTIVE TEAMS 209

9-1 The Scaling Challenge	209
9-2 A Scaled Adaptive Framework	210
9-3 A Hub Organizational Structure	211
9-4 Self-Organization Extensions	213
9-5 Team Self- Discipline	217
9-6 The Commitment-Accountability Protocol.....	218
9-7 Is It Working?	221
9-8 Structure and Tools	222
9-9 Summary	223

CHAPTER 10: RELIABLE INNOVATION.....	225
10-1 The Agile Vision.....	225
10-1-1 The Changing Face of New Product Development	225
10-1-2 Agile People and Processes Deliver Agile Products.....	227
10-2 Implementing the Vision.....	228
10-3 Reliable Innovation	230
10-4 The Value-Adding Project Manager	231
10-5 Conviction.....	233
BIBLIOGRAPHY	235

Preface

When the Manifesto for Agile Software Development (www.agilealliance.org) was written in spring 2001, it launched a movement—a movement that has raced through the software development community; generated controversy and debate; connected with related movements in manufacturing, construction; and aerospace; and been extended into project management.

The essence of this movement, whether in new product development, new service offerings, software applications, or project management, rests on two foundational goals: delivering innovative products to customers (particularly in highly uncertain situations) and creating working environments in which people look forward to coming to work each day.

Innovation continues to drive economic success for countries, industries, and individual companies. While the rates, of innovation in information technology in the last decade may have declined from prodigious to merely lofty, innovation in areas such as biotechnology and nanotechnology is picking up any slack.

New technologies such as combinatorial chemistry and sophisticated computer simulation are fundamentally altering the innovation process itself. When these technologies are 'applied to the innovation process, the cost of iteration can be driven down dramatically, enabling exploratory and processes to be both more effective and less costly than serial, specification-based processes. When it takes a pharmaceutical company months to develop a chemical compound and test it, errors are costly and careful laboratory design becomes the norm. When combinatorial chemistry can create hundreds, if not thousands, of compounds in a day and sophisticated instruments can test them in a few more days, careful specification and design can be less effective and more costly than careful experimentation. This same dynamic is at work in the automotive, integrated circuit, software, and pharmaceutical industries. It will soon be at work in your industry.

But taking advantage of these new innovation technologies has proved tricky. When exploration processes replace prescriptive processes, people have to change. For the chemist who now manages the experimental compounding process rather than designing compounds himself, and the manager who has to deal with hundreds of experiments rather than a detailed, prescriptive plan, new project management and organizational processes are required. Even when these technologies and processes are lower cost and higher performance than their predecessors, the transformation often proves difficult.

Experimentation matters, as the title of Harvard Business School professor Stefan Thomke's recent book exclaims (Thomke 2003), but many project managers are still mired in a prescriptive, conformance-to-plan mentality that eschews that very experimentation.

Project management, at least that sector of project management dealing with new product development, needs to be transformed, but to what? It needs to be transformed to move faster, be more flexible, and be aggressively customer responsive. Agile Project Management (APM) and agile product development answer, this transformational need. APM brings together a set of principles and practices that enables project managers to catch up with the realities of modern product development.

The target audience for this book is project managers, those hearty individuals who shepherd teams through the exciting but often messy process of turning visions into products—be they cell phones or medical electronic instruments. APM rejects the view of project managers as functionaries who merely comply with the bureaucratic demands of schedules and budgets and replaces it with one in which they are intimately involved in helping teams deliver products. Agile project managers focus on products and people, not paperwork.

There are four broad topics, covered in Agile Project Management: opportunity, principles, framework, and practices. The opportunity lies in creating innovative products and services—things that are new, different, and creative. These are products that can't be defined completely in the beginning but evolve over time through experimentation, exploration, and adaptation.

The principles of APM revolve around creating both adaptive products that are easy and less expensive to change and adaptive project teams that can

respond rapidly to changes in their project's ecosystem. The framework is a set of high-level processes, or phases—Envision, Speculate, Explore, Adapt, and Close—that support exploration and experimentation and deliver results reliably, even in the face of constant change, uncertainty, and ambiguity.

Finally, the practices—from developing a product vision box to getting the right people—provide actionable ways in which project teams can deliver results. At its core, APM focuses on customers, products, and people—delivering value to customers, building adaptable products, and engaging talented people in collaborative work.

Introduction

Agile Project management contains. Four focal points: the agile revolution and its impact on new product development; the values and principles that drive agile project management; a process framework; and the specific Practices that embody the principles and deliver results.

Chapter 1, The Agile Revolution introduces changes that are occurring in product development—from cell phones to .software and how these changes are driving down, the cost of experimentation and fundamentally altering how new product development should be managed. The chapter Outlines the, business objectives of APM and how organizations need to adapt to operating in Chaotic World.

Chapter 2 and 3 describe the value and principles that actuate APM. The value were first articulated in the Manifesto for Agile Software Development, and the principles are derived from the Manifesto, but. They are adapted from a development to a project management perspective. Chapter 2 covers the principles related to customers and products, while Chapter 3 covers principles related to leadership and management. Chapter2 will also introduce you to Herman and Maya, project managers from different companies and different culture who will explore through a series of chapter opening dialogues some of the, principles and Practices of APM.

Chapters 4– 8 cover the APM process framework and individual practices. Chapter 4 describes the phases in the process framework—Envision, Speculate, Explore, Adapt, and Close—and Chapters 5-8 identify and describe practices in each of the phases.

Chapter 9, Building Large Adaptive Teams, examines how agile principles are used, together with additional Practices, to scale APM to larger projects and larger teams.

Chapter 10, Reliable Innovation, underscores how APM helps address' the changing nature of new product development, summarizes the role of the agile project manager, and reflects on the need for conviction and courage in implementing agile project management and development.

Acknowledgments

Thank God, who gives thought to the human and gives man the enjoyment of learning and thinking. We feel obliged to appreciate and thank all the esteemed professors from the faculty of Management and Economic department, Nanjing University of Aeronautics and Astronautics, that we acquire knowledge from them, especially:

Dr. Fang Zhi Geng as Supervisor that did not spare any efforts to guide us happily, and a heart full of grace and he was always encouraging and helpful.

Dr. Chen Ye the respected Advisor and Dr. Sifeng Liu, honorable professors of Management Science and Engineering faculty, Nanjing University of Aeronautics and Astronautics, who has offered constructive comments and has added the content enrichment. We hope luck and prosperity for all these honorable professors.

All books are collaborative efforts, and this one is no exception. Many people have contributed ideas, reviews, comments, and inspiration that have helped me turn my ideas about agile project management into the reality of this book.

Although We take full responsibility for the content of the book, We had a wonderful group of reviewers who contributed significant time and effort to turning my drafts into a final product

Our special thanks goes to Karen coburn, president of the Cutter Consortium, for her support of agile project management, and permission, to include material We wrote for various Cutter publications in this book.

Finally, our special respect and thanks goes to our parents for their support and helped us to improve and increase our knowledge without any pressure in our lives.

The Agile Software Development Series

Among the people concerned with agility in software development over the last decade, Alistair Cockburn and we found so much in common that we joined efforts to bring to press an Agile Software Development Series based around relatively light, effective, human-powered software development techniques. We base the series on these two core ideas:

1. Different projects need different processes or methodologies.
2. Focusing on skills, communication, and community allows the project to be more effective and more agile than focusing on processes.

The series has the following main tracks:

- Techniques to improve the effectiveness of a person who is doing a particular sort of job. This might be a person who is designing a user interface, gathering requirements, planning a project, designing, or testing. Whoever is performing such a job will want to know how the best people in the world do their jobs. Writing Effective Use Cases (Cockburn 2011) and Patterns for Effective Use. Cases (Adolph et al, 2013) are individual technique books.
- Techniques to improve the effectiveness of a group of people. These might include techniques for team building, project retrospectives, collaboration, decision making, and the like. Improving Software Organizations (Mathiassen et al. 2012) and Surviving Object-Oriented Projects (Cockburn 2008) are group technique books.
- Examples of particular, successful agile methodologies. Whoever is selecting a base methodology to tailor will want to find one that has already been used successfully in a similar situation. Modifying an existing methodology is easier than creating a new one and is more effective than using one that was designed for a different situation. Agile and Iterative Development: A Manager's Guide (Layman 2014), DSDM: Business Focused Development (DSDM Consortium 2013), and Lean Software Development:

An Agile Toolkit (Poppendieck and Poppendieck 2013) are examples of methodology books.

Three books anchor the Agile Software Development Series:

1. This book, Agile Project Management, goes beyond software development to describe how a variety of projects can be better managed by applying agile principles and practices. It covers the business justification, principles, and practices of APM.
2. Agile Software Development Ecosystems (Highsmith 2012) identifies the unique problems in today's software development environment, describes the common principles behind agile development as expressed in the Agile Manifesto, and reviews each of the six major agile approaches.
3. Alistair's book, Agile Software Development (Cockburn 2012), expresses his thoughts about agile development using several themes: software development as a cooperative game, methodologies as conventions about coordination, and families of methodologies.

You can find more about Crystal, Adaptive, and other agile methodologies on these Web sites:

CHAPTER 1

The Agile Revolution

1-1 Innovative Product Development

Product development teams are facing a quiet revolution in which both engineers and managers are struggling to adjust. In industry after industry pharmaceuticals, software, automobiles, integrated circuits-customer demands for continuous innovation and the plunging cost of experimentation are signaling a massive switch from anticipatory, to adaptive style of development. This switch plays havoc with engineers, project managers, and executives who are still operating with anticipatory, prescriptive mindsets and processes geared to a rapidly disappearing era.

Symyx creates and operates highly integrated, complete workflows that enable scientists to explore their ideas to discover and optimize new materials hundreds to thousands times faster than traditional research methods. These workflows consist of robotics that synthesize arrays of materials on a miniaturized scale, creating hundreds to thousands of tiny experiments on one silicon chip. These materials are then rapidly screened in parallel for desired physical and functional properties, including chemical, thermal, optical, electronic, or mechanical attributes. The results are captured in database systems for mining large sets of data to help scientists make well-informed decisions on the next steps of the discovery process¹.

Symyx boasts 100 times the speed at 1% of the cost of traditional research. Drug companies used to design compounds for specific purposes by having scientists pore over how to make just the right one. Today they generate tens of thousands of compounds and then test them quickly using ultra-sophisticated, ultra-speedy tools such as mass spectrometers. There are new product development economics at work here.

Now, one of the field's leading experts brings together all the knowledge and resources you need to use APM and PMP, in your next project. Amirhossein Akhavan Mofrad and Narges Bahrami, shows why APM should be in every manager's toolkit in order to increasing productivity thoroughly addressing the questions project manager raise about Agile approaches. They systematically introduces the five -phase APM framework, then presents specific, proven practices for every project participant.

Coverage includes:

- Six principles of Agile project management
- productivity increasing through PMPOK
- How to capitalize on emerging new product development technologies
- Putting customers at the center of your project, where they belong
- Creating adaptive teams that respond quickly to changes in your project's " ecosystem"
- APM's five phases: Envision, Speculate, Explore, Adapt, Close
